- Python
- Django
- Html
- SQLite
- CSS

Projects

Cafe Management System

Developed with Tkinter

- A desktop-based Café Billing System developed using Python's Tkinter library for managing customer orders and generating bills.
- Includes features like adding quantity of menu items, automatic total and tax calculation, and generating formatted bill text for display and saving.
- Supports essential operations: calculating bill total, saving bill as a text file, clearing data for new orders, and exiting the application.
- Menu items with predefined prices are displayed with entry fields for quantity input, processed into a detailed bill including tax.

Stocks Management System

Developed With Python , Django

- A full-stack web app built with Python and Django to manage inventory items like Mobile Phones, TV, Wearables etc., using CRUD operations.
- Allows users to add, view, edit, and delete stock items.
- The frontend is designed with HTML and CSS, displaying items in a clean, responsive layout for easy management.
- In a Django Stocks Management System, CRUD operations are performed on stock data and saved in the default SQLite3 database using Django models.
